CONTENTS IN BRIEF

1	Introduction	1
2	Forecasting and Demand Modeling	5
3	Deterministic Inventory Models	45
4	Stochastic Inventory Models: Periodic Review	87
5	Stochastic Inventory Models: Continuous Review	155
6	Multiechelon Inventory Models	187
7	Pooling and Flexibility	229
8	Facility Location Models	267
9	Supply Uncertainty	355
10	The Traveling Salesman Problem	403
11	The Vehicle Routing Problem	463
12	Integrated Supply Chain Models	511
13	The Bullwhip Effect	539
14	Supply Chain Contracts	563
15	Auctions	591
16	Applications of Supply Chain Theory	615
	Appendix A: Multiple-Chapter Problems	643
	Appendix B: How to Write Proofs: A Short Guide	651
	Appendix C: Helpful Formulas	661

Appendix D: Integer Optimization Techniques	669
References	681

CONTENTS

List of Figures	xxi
List of Tables	xxvii
List of Algorithms	xxix
Preface	xxx
1 Introduction	1
1.1 The Evolution of Supply Chain Theory	1
1.2 Definitions and Scope	2
1.3 Levels of Decision-Making in Supply Chain Management	4
2 Forecasting and Demand Modeling	5
2.1 Introduction	5
2.2 Classical Demand Forecasting Methods	6
2.2.1 Moving Average	6
2.2.2 Exponential Smoothing	7
2.2.3 Linear Regression	13
2.3 Forecast Accuracy	15
2.3.1 MAD, MSE, and MAPE	15
2.3.2 Forecast Errors for Moving Average and Exponential Smoothing	16
2.4 Machine Learning in Demand Forecasting	17
2.4.1 Introduction	17
	ix

2.4.2	Machine Learning	18
2.5	Demand Modeling Techniques	23
2.6	Bass Diffusion Model	24
2.6.1	The Model	25
2.6.2	Discrete-Time Version	28
2.6.3	Parameter Estimation	29
2.6.4	Extensions	29
2.7	Leading Indicator Approach	30
2.8	Discrete Choice Models	33
2.8.1	Introduction to Discrete Choice	33
2.8.2	The Multinomial Logit Model	34
2.8.3	Example Application to Supply Chain Management	37
	<i>Case Study: Semiconductor Demand Forecasting at Intel</i>	38
	Problems	39
3	Deterministic Inventory Models	45
3.1	Introduction to Inventory Modeling	45
3.1.1	Why Hold Inventory?	45
3.1.2	Classifying Inventory Models	47
3.1.3	Costs	48
3.1.4	Inventory Level and Inventory Position	50
3.1.5	Roadmap	50
3.2	Continuous Review: The Economic Order Quantity Problem	51
3.2.1	Problem Statement	51
3.2.2	Cost Function	52
3.2.3	Optimal Solution	53
3.2.4	Sensitivity Analysis	55
3.2.5	Order Lead Times	56
3.3	Power-of-Two Policies	57
3.3.1	Analysis	57
3.3.2	Error Bound	58
3.4	The EOQ with Quantity Discounts	60
3.4.1	All-Units Discounts	62
3.4.2	Incremental Discounts	64
3.4.3	Modified All-Units Discounts	66
3.5	The EOQ with Planned Backorders	67
3.6	The Economic Production Quantity Model	70
3.7	Periodic Review: The Wagner–Whitin Model	72
3.7.1	Problem Statement	72
3.7.2	MIP Formulation	72
3.7.3	Dynamic Programming Algorithm	73
3.7.4	Extensions	76

	<i>Case Study: Ice Cream Production and Inventory at Scotsburn Dairy Group</i>	76
	Problems	77
4	Stochastic Inventory Models: Periodic Review	87
4.1	Inventory Policies	87
4.2	Demand Processes	89
4.3	Periodic Review with Zero Fixed Costs: Base-Stock Policies	89
4.3.1	Base-Stock Policies	90
4.3.2	Single Period: The Newsvendor Problem	90
4.3.3	Finite Horizon	102
4.3.4	Infinite Horizon	105
4.4	Periodic Review with Nonzero Fixed Costs: (s, S) Policies	114
4.4.1	(s, S) Policies	114
4.4.2	Single Period	115
4.4.3	Finite Horizon	116
4.4.4	Infinite Horizon	117
4.5	Policy Optimality	123
4.5.1	Zero Fixed Costs: Base-Stock Policies	124
4.5.2	Nonzero Fixed Costs: (s, S) Policies	129
4.6	Lost Sales	136
4.6.1	Zero Lead Time	136
4.6.2	Nonzero Lead Time	137
	<i>Case Study: Optimization of Warranty Inventory at Hitachi</i>	138
	Problems	140
5	Stochastic Inventory Models: Continuous Review	155
5.1	(r, Q) Policies	155
5.2	Exact (r, Q) Problem with Continuous Demand Distribution	156
5.2.1	Expected Cost Function	157
5.2.2	Optimality Conditions	159
5.3	Approximations for (r, Q) Problem with Continuous Distribution	161
5.3.1	Expected-Inventory-Level Approximation	161
5.3.2	EOQB Approximation	166
5.3.3	EOQ+SS Approximation	166
5.3.4	Loss-Function Approximation	167
5.3.5	Performance of Approximations	169
5.4	Exact (r, Q) Problem with Continuous Distribution: Properties of Optimal r and Q	170
5.4.1	Optimization of r and Q	172
5.4.2	Noncontrollable and Controllable Costs	172

5.4.3	Relationship to EOQB	173
5.5	Exact (r, Q) Problem with Discrete Distribution	177
	<i>Case Study: (r, Q) Inventory Optimization at Dell</i>	180
	Problems	182
6	Multiechelon Inventory Models	187
6.1	Introduction	187
6.1.1	Multiechelon Network Topologies	188
6.1.2	Stochastic vs. Guaranteed Service	189
6.2	Stochastic-Service Models	191
6.2.1	Serial Systems	191
6.2.2	Exact Approach for Serial Systems	193
6.2.3	Heuristic Approach for Serial Systems	197
6.2.4	Other Network Topologies	202
6.3	Guaranteed-Service Models	203
6.3.1	Introduction	203
6.3.2	Demand	204
6.3.3	Single-Stage Network	204
6.3.4	Serial Systems	207
6.3.5	Tree Systems	210
6.3.6	Solution Method	211
6.4	Closing Thoughts	217
	<i>Case Study: Multiechelon Inventory Optimization at Procter & Gamble</i>	222
	Problems	223
7	Pooling and Flexibility	229
7.1	Introduction	229
7.2	The Risk-Pooling Effect	230
7.2.1	Overview	230
7.2.2	Problem Statement	231
7.2.3	Decentralized System	231
7.2.4	Centralized System	231
7.2.5	Comparison	232
7.2.6	Magnitude of Risk-Pooling Effect	234
7.2.7	Closing Thoughts	235
7.3	Postponement	236
7.4	Transshipments	237
7.4.1	Introduction	237
7.4.2	Problem Statement	237
7.4.3	Expected Cost	240
7.4.4	Benefits of Transshipments	241

7.5	Process Flexibility	243
7.5.1	Introduction	243
7.5.2	Flexibility Design Guidelines	245
7.5.3	Optimality of the Chaining Structure	248
7.6	A Process Flexibility Optimization Model	253
7.6.1	Formulation	253
7.6.2	Lagrangian Relaxation	254
	<i>Case Study: Risk Pooling and Inventory Management at Yedioth Group</i>	257
	Problems	259
8	Facility Location Models	267
8.1	Introduction	267
8.2	The Uncapacitated Fixed-Charge Location Problem	269
8.2.1	Problem Statement	269
8.2.2	Formulation	270
8.2.3	Lagrangian Relaxation	272
8.2.4	The DUALOC Algorithm	282
8.2.5	Heuristics for the UFLP	291
8.3	Other Minisum Models	295
8.3.1	The Capacitated Fixed-Charge Location Problem (CFLP)	296
8.3.2	The p -Median Problem (p MP)	298
8.4	Covering Models	305
8.4.1	The Set Covering Location Problem (SCLP)	306
8.4.2	The Maximal Covering Location Problem (MCLP)	307
8.4.3	The p -Center Problem (p CP)	309
8.5	Other Facility Location Problems	314
8.5.1	Undesirable Facilities	314
8.5.2	Competitive Location	315
8.5.3	Hub Location	316
8.5.4	Dynamic Location	317
8.6	Stochastic and Robust Location Models	317
8.6.1	Introduction	317
8.6.2	The Stochastic Fixed-Charge Location Problem	318
8.6.3	The Minimax Fixed-Charge Location Problem	320
8.7	Supply Chain Network Design	321
8.7.1	Node Design	322
8.7.2	Arc Design	329
	<i>Case Study: Locating Fire Stations in Istanbul</i>	332
	Problems	335
9	Supply Uncertainty	355

9.1	Introduction to Supply Uncertainty	355
9.2	Inventory Models with Disruptions	356
9.2.1	The EOQ Model with Disruptions	357
9.2.2	The Newsvendor Problem with Disruptions	360
9.3	Inventory Models with Yield Uncertainty	365
9.3.1	The EOQ Model with Yield Uncertainty	366
9.3.2	The Newsvendor Problem with Yield Uncertainty	369
9.4	A Multisupplier Model	372
9.4.1	Problem Statement	373
9.4.2	Expected Profit	374
9.4.3	Optimality Conditions	375
9.4.4	Supplier Selection	377
9.4.5	Closing Thoughts	383
9.5	The Risk-Diversification Effect	384
9.5.1	Problem Statement	384
9.5.2	Notation	384
9.5.3	Optimal Solution	385
9.5.4	Mean and Variance of Optimal Cost	385
9.5.5	Supply Disruptions and Stochastic Demand	386
9.6	A Facility Location Model with Disruptions	387
9.6.1	Introduction	387
9.6.2	Notation	390
9.6.3	Formulation	391
9.6.4	Lagrangian Relaxation	392
9.6.5	Trade-off Curves	393
	<i>Case Study</i> : Disruption Management at Ford	395
	Problems	396
10	The Traveling Salesman Problem	403
10.1	Supply Chain Transportation	403
10.2	Introduction to the TSP	404
10.2.1	Overview	404
10.2.2	Formulation of the TSP	406
10.3	Exact Algorithms for the TSP	408
10.3.1	Dynamic Programming	408
10.3.2	Branch-and-Bound	408
10.3.3	Branch-and-Cut	410
10.4	Construction Heuristics for the TSP	416
10.4.1	Nearest Neighbor	417
10.4.2	Nearest Insertion	419
10.4.3	Farthest Insertion	423
10.4.4	Convex Hull	425

10.4.5	GENI	427
10.4.6	Minimum Spanning Tree Heuristic	430
10.4.7	Christofides' Heuristic	433
10.5	Improvement Heuristics for the TSP	436
10.5.1	k -Opt Exchanges	436
10.5.2	Or-Opt Exchanges	438
10.5.3	Unstringing and Stringing	440
10.6	Bounds and Approximations for the TSP	442
10.6.1	The Held–Karp Bound	442
10.6.2	Control Zones	449
10.6.3	Integrality Gap	450
10.6.4	Approximation Bounds	451
10.6.5	Tour Length as a Function of n	451
10.7	World Records	452
	<i>Case Study: Routing Meals on Wheels Deliveries</i>	453
	Problems	455
11	The Vehicle Routing Problem	463
11.1	Introduction to the VRP	463
11.1.1	Overview	463
11.1.2	Notation and Assumptions	465
11.1.3	Formulation of the VRP	465
11.2	Exact Algorithms for the VRP	468
11.2.1	Dynamic Programming	468
11.2.2	Branch-and-Bound	470
11.2.3	Branch-and-Cut	471
11.2.4	Set Covering	472
11.3	Heuristics for the VRP	475
11.3.1	The Clarke–Wright Savings Heuristic	475
11.3.2	The Sweep Heuristic	480
11.3.3	The Location-Based Heuristic	481
11.3.4	Improvement Heuristics	488
11.3.5	Metaheuristics	488
11.4	Bounds and Approximations for the VRP	495
11.4.1	TSP-Based Bounds	495
11.4.2	Optimal Objective Function Value as a Function of n	497
11.5	Extensions of the VRP	498
11.5.1	Distance-Constrained VRP	499
11.5.2	VRP with Time Windows	499
11.5.3	VRP with Backhauls	500
11.5.4	VRP with Pickups and Deliveries	500
11.5.5	Periodic VRP	500

	<i>Case Study: ORION: Optimizing Delivery Routes at UPS</i>	501
	Problems	502
12	Integrated Supply Chain Models	511
12.1	Introduction	511
12.2	A Location–Inventory Model	512
12.2.1	Introduction	512
12.2.2	Problem Statement	514
12.2.3	Notation	514
12.2.4	Objective Function	515
12.2.5	NLIP Formulation	516
12.2.6	Lagrangian Relaxation	517
12.2.7	Column Generation	524
12.2.8	Conic Optimization	527
12.3	A Location–Routing Model	529
12.4	An Inventory–Routing Model	531
	<i>Case Study: Inventory–Routing at Frito-Lay</i>	534
	Problems	535
13	The Bullwhip Effect	539
13.1	Introduction	539
13.2	Proving the Existence of the Bullwhip Effect	541
13.2.1	Introduction	541
13.2.2	Demand Signal Processing	542
13.2.3	Rationing Game	546
13.2.4	Order Batching	548
13.2.5	Price Speculation	551
13.3	Reducing the Bullwhip Effect	552
13.3.1	Demand Signal Processing	552
13.3.2	Rationing Game	554
13.3.3	Order Batching	554
13.3.4	Price Speculation	554
13.4	Centralizing Demand Information	555
13.4.1	Centralized System	555
13.4.2	Decentralized System	556
	<i>Case Study: Reducing the Bullwhip Effect at Philips Electronics</i>	556
	Problems	559
14	Supply Chain Contracts	563
14.1	Introduction	563
14.2	Introduction to Game Theory	564

14.3	Notation	565
14.4	Preliminary Analysis	566
14.5	The Wholesale Price Contract	568
14.6	The Buyback Contract	574
14.7	The Revenue Sharing Contract	578
14.8	The Quantity Flexibility Contract	581
	<i>Case Study: Designing a Shared-Savings Contract at McGriff</i>	
	Treading Company	584
	Problems	586
15	Auctions	591
15.1	Introduction	591
15.2	The English Auction	593
15.3	Combinatorial Auctions	595
15.3.1	The Combinatorial Auction Problem	595
15.3.2	Solving the Set-Packing Problem	597
15.3.3	Truthful Bidding	598
15.4	The Vickrey–Clarke–Groves Auction	599
15.4.1	Introduction	599
15.4.2	Weaknesses of the VCG Auction	602
15.4.3	VCG Auction as a Cooperative Game	605
	<i>Case Study: Procurement Auctions for Mars</i>	608
	Problems	610
16	Applications of Supply Chain Theory	615
16.1	Introduction	615
16.2	Electricity Systems	615
16.2.1	Energy Storage	616
16.2.2	Transmission Capacity Planning	621
16.2.3	Electricity Network Design	623
16.3	Health Care	625
16.3.1	Production Planning and Contracting for Influenza Vaccines	625
16.3.2	Inventory Management for Blood Platelets	628
16.4	Public Sector Operations	632
16.4.1	Disaster Relief Routing	632
16.4.2	Passenger Screening	635
16.4.3	Public Housing Location	637
	<i>Case Study: Optimization of the Natural Gas Supply Chain in China</i>	639
	Problems	641
	Appendix A: Multiple-Chapter Problems	643

Problems	643
Appendix B: How to Write Proofs: A Short Guide	651
B.1 How to Prove Anything	651
B.2 Types of Things You May Be Asked to Prove	653
B.3 Proof Techniques	655
B.3.1 Direct Proof	655
B.3.2 Proof by Contradiction	655
B.3.3 Proof by Mathematical Induction	656
B.3.4 Proof by Cases	657
B.4 Other Advice	657
Appendix C: Helpful Formulas	661
C.1 Positive and Negative Parts	661
C.2 Standard Normal Random Variables	662
C.3 Loss Functions	662
C.3.1 General Continuous Distributions	662
C.3.2 Standard Normal Distribution	663
C.3.3 Nonstandard Normal Distributions	664
C.3.4 General Discrete Distributions	664
C.3.5 Poisson Distribution	665
C.4 Differentiation of Integrals	665
C.4.1 Variable of Differentiation Not in Integral Limits	665
C.4.2 Variable of Differentiation in Integral Limits	665
C.5 Geometric Series	666
C.6 Normal Distributions in Excel and MATLAB	666
C.7 Partial Expectations	667
Appendix D: Integer Optimization Techniques	669
D.1 Lagrangian Relaxation	669
D.1.1 Overview	669
D.1.2 Bounds	670
D.1.3 Subgradient Optimization	672
D.1.4 Stopping Criteria	674
D.1.5 Other Problem Types	674
D.1.6 Branch-and-Bound	675
D.1.7 Algorithm Summary	675
D.2 Column Generation	675
D.2.1 Overview	675
D.2.2 Master Problem and Subproblem	677
D.2.3 An Example: The Cutting Stock Problem	678

1.1	Schematic diagram of supply chain network.	3
1.2	Supply “chain.”	3
2.1	Weight distribution for single exponential smoothing.	9
2.2	Random demands with trend and seasonality.	11
2.3	Observed demands for <i>The TSP Mystery</i> and best-fit line for Example 2.5.	15
2.4	Regression tree for baseball jerseys for Example 2.8.	21
2.5	A simple neural network.	24
2.6	Color TVs in the 1960s: Forecasts from Bass model and actual demands.	25
2.7	Bass diffusion curve.	26
2.8	An example of a leading-indicator product.	31
3.1	Inventory level curve.	49
3.2	EOQ inventory level curve.	52
3.3	Fixed, holding, and total costs as a function of Q .	53
3.4	Total purchase cost $c(Q)$ under quantity discounts.	61
3.5	Total purchase cost $c(Q)$ for Example 3.5.	62
3.6	Total cost curves for all-units quantity discount structure.	63
3.7	Total cost curves for incremental quantity discount structure.	65
3.8	Total purchase cost $c(Q)$ for modified all-units discounts structure.	67
3.9	EOQB inventory curve.	68
3.10	Inventory–backorder trade-off in EOQB.	70
3.11	EPQ inventory level curve.	71
3.12	Wagner–Whitin network.	75
3.13	Shortest path network for Problem 3.7.	79
3.14	Inventory level curve for Problem 3.23.	83
3.15	Inventory level curve for Problem 3.26.	84

4.1	Optimal solution to newsvendor problem plotted on demand distribution.	94
4.2	Optimal solution to newsvendor problem plotted on normal demand distribution.	98
4.3	$g(S)$ and $\Delta g(S)$.	101
4.4	DP results, $K = 0$: $y_t(x)$.	105
4.5	Inventory dynamics.	107
4.6	DP results, $K > 0$: $y_t(x)$.	117
4.7	Hypothetical shapes of the function $H(y)$.	125
4.8	Nonconvexity of $\theta_t(x)$.	130
4.9	$\theta_t(x)$ for $t = 8, \dots, 11$.	131
4.10	K -convexity.	131
4.11	Properties of K -convex functions from Lemma 4.16.	132
4.12	Proof of Lemma 4.16.	133
4.13	Process for handling returned drives at Hitachi.	139
4.14	$H(y)$ functions for Problem 4.38, with fixed cost $K \geq 0$ and ordering capacity $b \leq \infty$.	151
4.15	$H(y)$ function for Problem 4.39, with fixed cost $K > 0$.	152
5.1	Inventory level and inventory position under (r, Q) policy.	156
5.2	Inventory costs are equal at start and end of replenishment cycle.	159
5.3	Expected inventory curve for (r, Q) policy.	162
5.4	Relative error of (r, Q) approximations.	170
5.5	$A(Q)$ and $H(Q)$.	171
5.6	$g(Q)$ and $g_d(Q)$.	174
5.7	$A(Q)$ and $A_d(Q)$.	175
5.8	Determining which $Q + 1$ y -values are optimal given $r(Q)$.	178
6.1	Multiechelon network topologies.	188
6.2	Interpretation of stockout penalties.	190
6.3	N -stage serial system in stochastic-service model.	191
6.4	3-Stage serial system for Example 6.1.	197
6.5	Functions from Theorem 6.3 for Example 6.1.	198
6.5	Functions from Theorem 6.3 for Example 6.1 (cont'd).	199
6.6	Digital camera supply chain network.	203
6.7	Single-stage network.	206
6.8	N -stage serial system in guaranteed-service model.	207
6.9	Feasible region for two-stage system.	208
6.10	Example network for SSSPP DP algorithm for serial systems.	209
6.11	A counterexample to the "all-or-nothing" claim for tree systems.	212
6.12	Relabeling the network.	212
6.13	Example network for SSSPP DP algorithm for tree systems.	215
6.14	Digital camera supply chain network, with holding costs and processing times.	218
6.15	Optimal CSTs and inventories for digital camera supply chain (CST to end customer = 2).	220
6.16	Optimal CSTs and inventories for digital camera supply chain (CST to end customer = 8).	221
6.17	SSSPP trade-off curve: expected cost vs. end-customer CST.	222
6.18	Baseball-hat supply chain for Problem 6.9.	225
7.1	The risk-pooling effect with identical retailers.	230
7.2	Possible realizations of transshipment and ending inventories.	239

7.3	Examples of flexibility configurations.	245
7.4	Two chaining structures.	247
7.5	\mathcal{L}_k^n structure for $k = 4$ and $n = 6$.	250
7.6	Examples of different chaining structures for nonhomogeneous demand case.	256
7.7	Three-stage flexibility structure for Problem 7.10.	263
8.1	Facility location configurations.	268
8.2	Optimal solution to 88-node UFLP instance.	280
8.3	Customer and facility layout for Example 8.2.	287
8.4	Sorted facility positions for Example 8.2.	287
8.5	Considering each facility for iteration 1 of greedy algorithm for UFLP.	293
8.6	Considering each facility for iteration 2 of greedy algorithm for UFLP, with facility in St. Louis, MO, fixed open.	294
8.7	Solutions from iterations 3, 4, and 5 of greedy algorithm for UFLP.	295
8.8	Optimal solution to 88-node p MP instance with $p = 6$.	300
8.9	Greedy and swap solutions for 88-node p MP instance with $p = 6$.	302
8.10	Neighborhood of Springfield, IL in greedy solution to 88-node instance for p MP with $p = 6$.	304
8.11	400-mile coverage radii around facilities in 6-median solution to 88-node instance.	305
8.12	Optimal SCLP solution for 88-node instance with coverage radius of 400 miles.	308
8.13	Optimal MCLP solution for 88-node instance with coverage radius of 400 miles and $p = 6$.	310
8.14	Coverage vs. p for 88-node data set with 400-mile coverage radius.	310
8.15	Optimal p CP solution for 88-node instance with $p = 6$.	314
8.16	Three echelons in node design problem.	323
8.17	Optimal solution to 98-node node design instance.	327
8.18	Sequential-optimization solution to 98-node node design instance.	328
8.19	Simple arc design problem instance.	329
8.20	Hungary cities arc design problem instance.	332
8.21	Solutions to Hungary cities arc design problem instance	333
8.22	10-node facility location instance for Problems 8.2–8.11.	336
8.23	UFLP instance for Problem 8.20.	340
8.24	UFLP instance for Problem 8.21.	341
9.1	EOQ inventory curve with disruptions.	357
9.2	Exact EOQD cost $g(Q)$ for Example 9.1.	359
9.3	Approximate and exact EOQD costs $\hat{g}(Q)$ and $g(Q)$ for Example 9.2.	361
9.4	EOQ inventory curve with yield uncertainty.	366
9.5	pdf/pmf of quantity received from each supplier for Example 9.9.	380
9.6	pdf of quantity received from each supplier for Example 9.10.	382
9.7	$\tilde{\Pi}(Q)$ for Example 9.10.	383
9.8	UFLP solution for 49-node data set.	388
9.9	UFLP solution for 49-node data set, after disruption of facility in Sacramento.	388
9.10	Reliable solution for 49-node data set.	389
9.11	Sample RFLP trade-off curve.	394
10.1	Hamiltonian cycles.	404

10.2	<i>Car 54</i> TSP instance.	405
10.3	Optimal solution to <i>Car 54</i> TSP instance.	405
10.4	Subtours.	407
10.5	TSP instance for examples.	410
10.6	Cutting planes.	412
10.7	Handle and teeth for 2-matching inequality.	413
10.8	Handle and teeth for comb inequality.	416
10.9	Nearest-neighbor tour for example instance.	418
10.10	Nearest-neighbor solution to <i>Car 54</i> TSP instance.	419
10.11	Nearest-insertion tour for example instance.	421
10.12	Nearest-insertion solution to <i>Car 54</i> TSP instance.	421
10.13	TSP instance for proof that NI bound is tight.	422
10.14	Cheapest-insertion solution to <i>Car 54</i> TSP instance.	423
10.15	Farthest-insertion tour for example instance.	424
10.16	Farthest-insertion solution to <i>Car 54</i> TSP instance.	425
10.17	Convex-hull tour for example instance.	426
10.18	Convex-hull solution to <i>Car 54</i> TSP instance.	426
10.19	Inserting a node between two nonadjacent nodes in the GENI heuristic.	428
10.20	GENI Type I insertion.	428
10.21	GENI Type II insertion.	429
10.22	4-neighborhood of node 5.	429
10.23	Tour generated by minimum spanning tree heuristic for example instance.	432
10.24	Tour obtained by applying MST heuristic to <i>Car 54</i> instance.	432
10.25	Matchings.	434
10.26	Tour generated by Christofides' heuristic for example instance.	435
10.27	Tour obtained by applying Christofides' heuristic to <i>Car 54</i> instance.	435
10.28	TSP tour and matchings on odd-degree nodes in Christofides' heuristic.	436
10.29	Two possible ways to reconnect tour during 2-opt exchange.	437
10.30	Tour obtained by applying 2-opt heuristic to nearest-neighbor tour for <i>Car 54</i> instance.	438
10.31	Eight possible ways to reconnect tour during 3-opt exchange.	439
10.32	Or-opt exchanges.	439
10.33	Tour obtained by applying Or-opt heuristic to nearest-neighbor tour for <i>Car 54</i> instance.	440
10.34	US Type I unstringing of node k .	441
10.35	US Type II unstringing of node k .	441
10.36	Minimum spanning tree for <i>Car 54</i> instance.	443
10.37	Optimal 1-trees for <i>Car 54</i> instance.	444
10.38	1-tree example.	445
10.39	Optimal 1-tree for instance in Figure 10.5 with $\lambda_5 = 10$.	448
10.40	Optimal 1-tree for instance in Figure 10.5 with optimal λ .	448
10.41	Control zones.	449
10.42	Moats.	450
10.43	TSP world records.	454
10.44	Space-filling curve heuristic.	455
10.45	TSP instance for Problems 10.1 and 10.2.	456
10.46	TSP instance for Problems 10.3 and 10.4.	457
10.47	TSP instance for Problems 10.5 and 10.6.	457
10.48	TSP instance for Problem 10.16.	458

10.49	TSP instance for Problem 10.17.	459
10.50	TSP instance for Problem 10.32.	461
11.1	Optimal solution to e1151 VRP instance.	464
11.2	Clarke–Wright savings heuristic.	476
11.3	VRP instance for examples.	477
11.4	Clarke–Wright savings heuristic for instance in Figure 11.1.	479
11.5	Clarke–Wright solution to e1151 VRP instance.	479
11.6	Sweep heuristic for instance in Figure 11.1.	481
11.7	Sweep heuristic solution to e1151 VRP instance.	482
11.8	Approximating the VRP by the CCLP in the location-based heuristic.	482
11.9	LBH solution for instance in Figure 11.1.	485
11.10	Feasible solution for CCLP in proof of Theorem 11.5.	488
11.11	Node exchange for VRP.	488
11.12	A few possible λ -interchange moves for VRP.	490
11.13	Ejection chain move for VRP.	491
11.14	A simple genetic algorithm for the UFLP.	492
11.15	One-point crossover for VRP leading to infeasible solution.	492
11.16	PMX-based crossover operator.	493
11.17	EAX-based crossover operator.	494
11.18	Figures for proof of Theorem 11.6.	496
11.19	Approximate lower and upper bounds on z^* vs. n for points in unit square and $C = 50$.	497
11.20	Asymptotic behavior of VRP solution as $n \rightarrow \infty$.	498
11.21	VRP instance for Problem 11.1.	503
11.22	VRP instance for Problem 11.2.	504
11.23	VRP instance for Problem 11.4.	506
11.24	VRP instance for Problem 11.5.	507
12.1	Proof of Theorem 12.1(c).	520
12.2	Solution to problem (P_j) .	520
12.3	Optimal solution to 88-node LMRP instance.	522
12.4	UFLP-based solution to 88-node LMRP instance.	525
12.5	3-Node LMRP instance for Problem 12.5.	536
13.1	Increase in order variability in upstream supply chain stages.	540
13.2	Serial supply chain network.	542
13.3	BWE spreadsheet simulation.	552
13.4	BWE caused by price fluctuations.	553
13.5	Philips Optical Storage’s DVD supply chain network.	558
13.6	One-warehouse, multiple-retailer system for Problem 13.2.	560
14.1	Supplier’s expected profit function $\pi_s(Q, w(Q))$ for Example 14.1.	573
14.2	Wholesale price and profits as a function of buyback credit.	579
15.1	Bidders’ valuations in double auction in Problem 15.6.	613
16.1	Two arcs with different capacities.	623
16.2	Exact and approximate $T(f)$ function for epidemiological model.	627
16.3	Typical disaster-relief supply chain.	632

LIST OF TABLES

2.1	Monthly historical demand of books and CDs for Examples 2.1–2.5.	7
2.2	Demands (D_t), forecasts (y_t), and forecast errors (e_t) for <i>An Inventory Story</i> , periods 13–24, for Example 2.6.	17
2.3	Snippet of historical data on demand for baseball jerseys for Examples 2.7–2.9.	19
2.4	Bass model parameters.	30
2.5	Estimated utilities V_{ni} for uPhone models for Example 2.11.	36
2.6	$\exp(V_{ni})$ values for Example 2.11.	36
2.7	Choice probabilities P_{ni} and segment sizes for Example 2.11.	36
4.1	Sample demands and stockouts.	110
4.2	$g(y)$ for Example 4.7.	121
4.3	Demand for in-flight meals for Problem 4.3.	141
4.4	Probability distribution of TV show duration for Problem 4.7(b).	143
5.1	Mean and maximum error of (r, Q) approximations.	170
5.2	$F(y)$ and $g(y)$ for Poisson(3) demand with $h = 0.2$, $p = 1.5$.	180
6.1	Stochastic-service model notation summary.	193
7.1	Demand mean and standard deviation at DCs in Example 7.1.	233
7.2	DVR parameters for Problem 7.6.	261
8.1	Greedy algorithm costs: Iteration 1.	292
8.2	Greedy algorithm costs: Iteration 2.	292
8.3	Paper-company data for Problem 8.19.	340
9.1	pmf, cdf, and costs of supplier disruptions in Example 9.3.	365
9.2	Key quantities for suppliers in Example 9.9.	380
9.3	Disruption costs for optimal DCs.	389
10.1	Node coordinates for Problems 10.5 and 10.6.	457

11.1	All positive entries of sorted savings list for VRP instance in Figure 11.3.	478
11.2	Node coordinates for Problem 11.1.	503
11.3	Node coordinates and demands for Problem 11.2.	504
11.4	Node coordinates and demands for Problem 11.3.	505
11.5	Partial savings list for Problem 11.4.	505
11.6	Partial savings list for Problem 11.5.	506
12.1	Costs for optimal and UFLP-based solution to 88-node LMRP instance.	522
13.1	Bounds on variability increase: Decentralized vs. centralized.	557
13.2	Data for Problem 13.2.	560
14.1	Payoffs for a sample game.	564
14.2	Payoffs after implementing a contract.	565
14.3	Contracting notation summary.	566
15.1	Valuations that induce nontruthful bidding.	598
15.2	Single-item VCG auction for Example 15.1.	601
15.3	Two-item VCG auction for Example 15.1.	601
15.4	Valuations that induce zero revenue in the VCG auction.	602
15.5	Valuations that induce nonmonotonicity in the VCG auction.	603
15.6	Valuations that induce collusion in the VCG auction.	604
15.7	Noncollusive bids that fail to game the VCG auction.	604
15.8	Valuations that induce multiple identities in the VCG auction.	605
15.9	Valuations for English auction in Problem 15.1.	611
15.10	Transaction costs for double auction in Problem 15.6.	613
15.11	Valuations for VCG auction in Problem 15.7.	614
A.1	Demand for finished compost for Problem A.2(b).	644
A.2	Customer parameters for Problem A.5(d).	646
A.3	V_{ni} values for Problem A.9.	647

LIST OF ALGORITHMS

2.1	Leading-indicator identification	32
3.1	Wagner–Whitin algorithm	74
4.1	DP for finite-horizon inventory problem	103
4.2	Exact algorithm for periodic-review (s, S) policies with discrete demand distribution (Zheng and Federgruen 1991)	120
5.1	Iterative algorithm for EIL approximation for (r, Q) policy	164
5.2	Exact algorithm for continuous-review (r, Q) policy with continuous demand distribution	172
5.3	Exact algorithm for continuous-review (r, Q) policy with discrete demand distribution (Federgruen and Zheng 1992)	179
6.1	Relabel stages	212
6.2	DP algorithm for tree SSSPP	214
8.1	Solve (UFLP-LR $_{\lambda}$)	275
8.2	Get feasible solution for UFLP from solution to (UFLP-LR $_{\lambda}$)	277
8.3	Lagrangian relaxation algorithm for UFLP	279
8.4	Dual-ascent procedure for DUALOC algorithm	285
8.5	Dual-adjustment procedure for DUALOC algorithm	290
8.6	Greedy-add heuristic for UFLP	291
8.7	Swap heuristic for p MP	301
8.8	Neighborhood search heuristic for p MP	303
8.9	SCLP-based algorithm for p CP	313
8.10	1-Center on a tree	348
8.11	2-Center on a tree	349

10.1	Nearest neighbor heuristic	418
10.2	Nearest insertion heuristic	420
10.3	Cheapest insertion heuristic	423
10.4	GENI heuristic	430
10.5	MST heuristic	431
10.6	Christofides' heuristic	434
11.1	Set covering-based algorithm for VRP	475
11.2	Clarke–Wright savings heuristic	476
11.3	Randomized Clarke–Wright savings heuristic	478
11.4	Sweep heuristic	480
11.5	Location-based heuristic for VRP	484
12.1	Solve (P'_j)	520
D.1	Lagrangian relaxation	676
