

Recursion

Basic and Complex Recursion

Brad Miller David Ranum

12/19/2005

Outline

1 Objectives

2 What Is Recursion?

- Calculating the Sum of a List of Numbers
- The Three Laws of Recursion
- Converting an Integer to a String in Any Base

3 Stack Frames: Implementing Recursion

4 Complex Recursive Problems

- Tower of Hanoi
- Sierpinski Triangle
- Cryptography and Modular Arithmetic

5 Summary

Objectives

- To understand that complex problems that may otherwise be difficult to solve may have a simple recursive solution.
- To learn how to formulate programs recursively.
- To understand and apply the three laws of recursion.
- To understand recursion as a form of iteration.
- To implement the recursive formulation of a problem.
- To understand how recursion is implemented by a computer system.

Outline

- 1 Objectives
- 2 What Is Recursion?
 - Calculating the Sum of a List of Numbers
 - The Three Laws of Recursion
 - Converting an Integer to a String in Any Base
- 3 Stack Frames: Implementing Recursion
- 4 Complex Recursive Problems
 - Tower of Hanoi
 - Sierpinski Triangle
 - Cryptography and Modular Arithmetic
- 5 Summary

The Iterative Sum Function

```
1 def listsum(l):  
2     sum = 0  
3     for i in l:  
4         sum = sum + i  
5     return sum
```

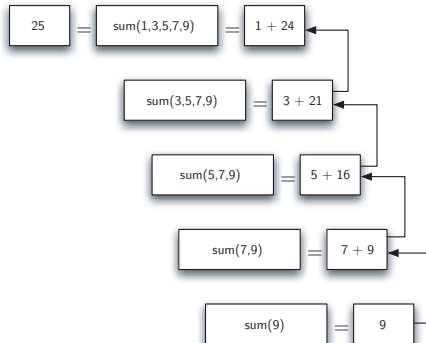

Recursive listSum

```
1 def listsum(l):  
2     if len(l) == 1:  
3         return l[0]  
4     else:  
5         return l[0] + listsum(l[1:])
```

Series of Recursive Calls Adding a List of Numbers

Series of Recursive Returns from Adding a List of Numbers

Outline

- 1 Objectives
- 2 **What Is Recursion?**
 - Calculating the Sum of a List of Numbers
 - **The Three Laws of Recursion**
 - Converting an Integer to a String in Any Base
- 3 Stack Frames: Implementing Recursion
- 4 Complex Recursive Problems
 - Tower of Hanoi
 - Sierpinski Triangle
 - Cryptography and Modular Arithmetic
- 5 Summary

- ❶ A recursive algorithm must have a **base case**.
- ❷ A recursive algorithm must change its state and move toward the base case.
- ❸ A recursive algorithm must call itself, recursively.

Outline

- 1 Objectives
- 2 What Is Recursion?
 - Calculating the Sum of a List of Numbers
 - The Three Laws of Recursion
 - Converting an Integer to a String in Any Base
- 3 Stack Frames: Implementing Recursion
- 4 Complex Recursive Problems
 - Tower of Hanoi
 - Sierpinski Triangle
 - Cryptography and Modular Arithmetic
- 5 Summary

- 1 Reduce the original number to a series of single-digit numbers.
- 2 Convert the single digit-number to a string using a lookup.
- 3 Concatenate the single-digit strings together to form the final result.

Converting an Integer to a String in Base 10

Converting an Integer to a String in Base 2–16

```
1 convertString = "0123456789ABCDEF"
2
3 def toStr(n,base):
4     if n < base:
5         return convertString[n]
6     else:
7         return toStr(n / base,base) + convertString[n%base]
```

Converting the Number 10 to its Base 2 String Representation

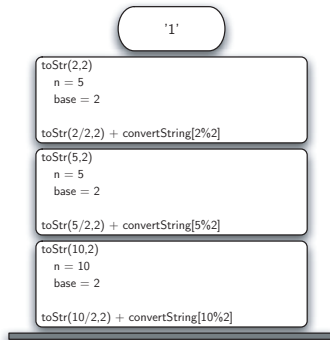

Pushing the Strings onto a Stack

```
1 convertString = "0123456789ABCDEF"
2 rStack = Stack()
3
4 def toStr(n,base):
5     if n < base:
6         rStack.push(convertString[n])
7     else:
8         rStack.push(convertString[n%base])
9         toStr(n / base,base)
```

Strings Placed on the Stack During Conversion

Call Stack Generated from `toStr(10, 2)`

Outline

- 2 What Is Recursion?
 - Calculating the Sum of a List of Numbers
 - The Three Laws of Recursion
 - Converting an Integer to a String in Any Base
- 3 Stack Frames: Implementing Recursion
- 4 **Complex Recursive Problems**
 - **Tower of Hanoi**
 - Sierpinski Triangle
 - Cryptography and Modular Arithmetic
- 5 Summary

An Example Arrangement of Disks for the Tower of Hanoi

- 1 Move a tower of height-1 to an intermediate pole, using the final pole.
- 2 Move the remaining disk to the final pole.
- 3 Move the tower of height-1 from the intermediate pole to the final pole using the original pole.

Python Code for the Tower of Hanoi

```
1 def moveTower(height,fromPole, toPole, withPole):  
2   if height >= 1:  
3     moveTower(height-1,fromPole,withPole,toPole)  
4     moveDisk(fromPole,toPole)  
5     moveTower(height-1,withPole,toPole,fromPole)
```

Python Code to Move One Disk

```
1 def moveDisk(fp,tp):  
2 print "moving disk from %d to %d\n" % (fp,tp)
```

The Sierpinski Triangle

Code for the Sierpinski Triangle I

```
1  def sierpinskiT(points, level, win):
2      colormap = ['blue', 'red', 'green', 'white',
3                  'yellow', 'violet', 'orange']
4      p = Polygon(points)
5      p.setFill(colormap[level])
6      p.draw(win)
7      if level > 0:
8          sierpinskiT([points[0], getMid(points[0], points[1]),
9                      getMid(points[0], points[2])], level-1, win)
10         sierpinskiT([points[1], getMid(points[0], points[1]),
11                     getMid(points[1], points[2])], level-1, win)
12         sierpinskiT([points[2], getMid(points[2], points[1]),
13                     getMid(points[0], points[2])], level-1, win)
14
15
```

Code for the Sierpinski Triangle II

```
16 def getMid(p1,p2):
17     return Point( ((p1.getX()+p2.getX()) / 2.0),
18                   ((p1.getY()+p2.getY()) / 2.0) )
19
20 if __name__ == '__main__':
21     win = GraphWin('st',500,500)
22     win.setCoords(20,-10,80,50)
23     myPoints = [Point(25,0),Point(50,43.3),Point(75,0)]
24     sierpinskiT(myPoints,6,win)
```

- 5 Summary

A Simple Modular Encryption Function

```
1
2 def encrypt(m):
3     s = 'abcdefghijklmnopqrstuvwxyz'
4     n = ''
5     for i in m:
6         j = (s.find(i)+13)%26
7         n = n + s[j]
8     return n
```

Decryption Using a Simple Key

```
1 def decrypt(m,k):
2     s = 'abcdefghijklmnopqrstuvwxyz'
3     n = ''
4     for i in m:
5         j = (s.find(i)26-k)%26
6         n = n + s[j]
7     return n
```

- 1 If $a \equiv b \pmod{n}$ then $\forall c, a + c \equiv b + c \pmod{n}$.
- 2 If $a \equiv b \pmod{n}$ then $\forall c, ac \equiv bc \pmod{n}$.
- 3 If $a \equiv b \pmod{n}$ then $\forall p, p > 0, a^p \equiv b^p \pmod{n}$.

- ❶ Initialize `result` to 1.
- ❷ Repeat `n` times:
 - ❶ Multiply `result` by `x`.
 - ❷ Apply modulo operation to `result`.

Recursive Definition for $x^n \pmod p$

```
1 def modexp(x,n,p):  
2     if n == 0:  
3         return 1  
4     t = (x*x)%p  
5     tmp = modexp(t,n/2,p)  
6     if n%2 != 0:  
7         tmp = (tmp * x) % p  
8     return tmp
```

Euclid's Algorithm for GCD

```
1 def gcd(a,b) :  
2     if b == 0:  
3         return a  
4     elif a < b:  
5         return gcd(b,a)  
6     else :  
7         return gcd(a-b,b)
```

An Improved Euclid's Algorithm

```
1 def gcd(a,b) :  
2     if b == 0:  
3         return a  
4     else :  
5         return gcd(b, a % b)
```

Extended GCD

```
1  def ext_gcd(x, y) :  
2      if y == 0:  
3          return (x, 1, 0)  
4      else :  
5          (d, a, b) = ext_gcd(y, x%y)  
6          return (d, b, a - (x/y) * b)
```

Call Tree for Extended GCD Algorithm

RSA KeyGen Algorithm

```
1  def RSAGenKeys(p,q) :
2      n = p * q
3      pqminus = (p-1) * (q-1)
4      e = int(random.random() * n)
5      while gcd(pqminus,e) != 1:
6          e = int(random.random() * n)
7      d,a,b = ext_gcd(pqminus,e)
8      if b < 0:
9          d = pqminus+b
10     else :
11         d = b
12     return ((e,d,n))
```

RSA Encrypt Algorithm

```
1  def RSAencrypt(m,e,n):
2      ndigits = len(str(n))
3      chunkSize = ndigits - 1
4      chunks = toChunks(m,chunkSize)
5      encList = []
6      for messChunk in chunks:
7          print messChunk
8          c = modexp(messChunk,e,n)
9          encList.append(c)
10     return encList
```

RSA Decrypt Algorithm

```
1 def RSAdecrypt(clist,d,n):  
2     rList = []  
3     for c in clist:  
4         m = modexp(c,d,n)  
5         rList.append(m)  
6     return rList
```

Recursion Summary

- All recursive algorithms must have a base case.
- A recursive algorithm must change its state and make progress toward the base case.
- A recursive algorithm must call itself (recursively).
- Recursion can take the place of iteration in some cases.
- Recursive algorithms often map very naturally to a formal expression of the problem you are trying to solve.
- Recursion is not always the answer. Sometimes a recursive solution may be more computationally expensive than an alternative algorithm.
